M Imran Arshad

Self-motivated full-stack developer passionate about building clean, reliable, and scalable applications.

buildwithimran@gmail.com buildwithimran buildwithimran buildwithimran.online

Summary

Full stack engineer with 5 plus years of experience delivering scalable applications across restaurant management, POS systems, ecommerce flows and SaaS dashboards using the MEAN stack. Skilled in building core modules from scratch, developing multilingual interfaces and architecting reusable UI components that convert complex business workflows into clean and maintainable software. A strong team contributor who works effectively in both remote and on site environments, bringing clear communication, problem solving and ownership to high impact product development.

Professional Experience

Sittap Front-End Developer, Paris, Full-Time (Remote)
03/2022 – Present

- Worked across three major restaurant management and POS products in a fast-paced **product based startup**, contributing to scalable web and tablet solutions used by multi-branch restaurant environments.
- Built critical platform modules from **scratch**, including menu management, product customization, SKU and modifier engines, stock workflows and order processing forming the core operating framework used daily across restaurants.
- Implemented **8 plus language** multilingual support using Angular **i18n** and scheduled caching, improving content delivery speed and global UX consistency.
- Developed reusable and scalable **Angular** components, with supporting contributions in **Ionic and Flutter**, enabling consistent mobile-friendly interfaces and reducing duplicate development across products.
- Created KPI dashboards and reporting views that enabled managers to make faster, data-driven decisions across restaurant branches.
- Collaborated with backend team to convert complex workflows into stable, maintainable and scalable frontend solutions aligned with long term product goals.

Coliseum Soft Mean Stack Developer, Faisalabad, Full-Time (on-site)
01/2020 – 03/2022

- As a Mean stack developer delivered **production-grade** features for SaaS dashboards and websites.
- Built foundational product modules from scratch including user management, reporting, admin controls and workflow automation, significantly improving operational efficiency across multiple client systems.
- Designed robust **REST APIs** and enhancing performance, data integrity and scalability across several long-running applications.
- Developed **reusable Angular architectures** and shared modules, reducing development time and maintaining consistent UI standards across product teams.

Projects

Buy & Sell Marketplace

Developed a multi vendor marketplace using Flutter, Node.js and MongoDB, providing categorized listings and advanced search features for smooth product browsing.

Chat & Communication Features

Developed a real-time messaging app using Flutter, Node.js, MongoDB, and Firebase, featuring user authentication, chat functionality, and customizable themes.

Skills
